

Matlab features integration with SimTK modules

The MathWorks - MATLAB and Simulink for Technical Computing

The screenshot shows the MathWorks website header with the logo and tagline "Accelerating the pace of engineering and science". The navigation bar includes "Select Country", "Contact Us", "Store", "Search", "Create Account", and "Log In". Below the navigation bar are tabs for "Products & Services", "Industries", "Academia", "Support", "User Community", and "Company". The main content area is divided into "MATLAB® Featured Products" and "Simulink® Featured Products". Under "MATLAB® Featured Products", there is a list: "Distributed Computing Toolbox", "Events", "News", and "Careers". Under "Simulink® Featured Products", there is a list: "SimEvents NEW". On the left side, there is a "Featured Resources" section with a link to "Integrating Matlab with SimTK modules" and a sub-link "Join the active MATLAB user community now.". Below this is a link to "Enable Team Access to Downloads". At the bottom of the featured resources section, there is a link to "View all Seminars, Tradeshows, Live and Recorded Webinars" and a "Call for Papers" link.

Before you get home:

- Create an “open project” on SimTK & commit to contributing an application -- something you would like to share.
- Describe (and request) one application (model/analysis tool) you would most like to see on SimTK.
